

Model 3P5-X

The **Model 3P5-X** is a portable pneumatic machine specifically designed for applications that require eyelets with a hole size larger than 14mm. The X is the larger, more robust version of the standard 3P5. This unit weighs 20.5kg, and measures 446mm tall, 115mm wide and 356mm deep. Even though the 3P5-X is specifically designed for the larger eyelets, it comes with an adapter set to run the standard 3P5 tools for smaller eyelets (up to 14mm hole size). All of the setting tools in the 3P5-X line are interchangeable, and are simply threaded in-place to facilitate fast conversions between eyelet sizes. This machine is built on a sturdy welded frame and designed for safe operation, portability and ease of use.

The 3P5-X is designed to be portable or bench mounted. Several alternative configurations allow the 3P5-X to be used in the most productive manner including: (a) Pedestal Stand with optional foot pedal; (b) Mobile Base for floor work; and (c) Tool Rack with Storage Bins (configurations shown with the 3P5 unit).

The 3P5-X delivers an efficient solution to the ergonomic challenges of using a hammer or manual press to set oversized grommets. This machine is capable of punching a hole in a variety of heavy-duty industrial fabrics and setting a grommet, all in a single cycle. Certain applications, however, may require pre-punched holes, all dependent upon the type, density and thickness of the materials.
